

LIMITED REVERSE ENGINEERING AUTHORIZATION

(Draft for SPT execution - Applicant-prepared)

Document No.: SPT-LRE-DRAFT-20260809-R50
Prepared date: 09 August 2026
Status: DRAFT - awaiting SPT authorized signature
Proposed term: 2026-08-09 to 2027-08-09

1. Parties

Licenser (to be completed / confirmed by SPT):

- Society of Photo-Technologists (SPT) / C&C Associates Technologies
- 11112 S. Spotted Road
- Cheney, WA 99004-9038
- USA
- Phone: 509-710-4464
- Website: <https://spt.info/>
- Contact form: <https://spt.info/sptstore.php/contact/>

Licensee (Applicant — personal identity fields left blank where not available in the project workspace; complete before sending to SPT):

Full legal name: [TO BE COMPLETED BY APPLICANT]
Country / region: [TO BE COMPLETED BY APPLICANT]
Email: [TO BE COMPLETED BY APPLICANT]
Prior SPT ticket / order: [TO BE COMPLETED IF APPLICABLE]
Project path: C:\Users\86152\Projects\TornadoEos

2. Background (actual measured data)

The Applicant owns the camera identified below and operates a personal, non-commercial interoperability project named TornadoEos. The following identification data were obtained by a read-only Windows Portable Devices / MTP query against the Applicant's own camera (no property writes; no service-mode entry):

Camera model: Canon EOS R50
Market / language set: Japanese-market regional body (Japanese + English menus)
Firmware (user-facing): 1.5.0
Firmware (WPD string): 3-1.5.0
Canon model ID: 0x80000480
USB identity: Canon VID 0x04A9, PID 0x330D
Protocol: MTP 1.00
Device serial (WPD): 6f63db071241f1df1d2d2bad4c755979
WPD DeviceId: \\?\usb#vid_04a9&pid_330d&mi_00#6&1d31853a&2&0000#{6ac27878-a6fa-4155-ba85-f98f491d4f33}
WPD properties read: 23
Canon vendor opcodes exposed: 136
EOS device properties enumerated: 150

The Applicant downloaded the free demonstration package EOS_R6_ProADVANCED_DEMO_4_3_0.zip from the official SPT website. That archive contains R6 demonstration components and does not contain an EOS R50-specific BootFaexe.bin. The Applicant understands that model-specific service files must not be cross-used between camera models.

3. Requested limited exception (scope)

Notwithstanding reverse-engineering restrictions in the EULA applicable to EOS_R6_ProADVANCED_DEMO_4_3_0.zip, the Applicant requests that SPT grant a limited, non-exclusive, non-transferable, revocable written permission to perform ONLY the following:

- Limited static analysis (including decompilation/disassembly) of the SPT demonstration components solely to identify WPD/MTP interoperability interfaces used with a supported Canon camera.
- Dynamic debugging and observation of USB/WPD/MTP communications while the demonstration software runs on the Applicant's own computer and communicates with the Applicant's own camera.
- Identification of protocol operation codes, packet structures, camera model validation, and factory-session bootstrap sequences as observable in demonstration behavior.
- Independent implementation of compatible protocol behavior in TornadoEos, without copying SPT source code or redistributing SPT binaries.
- Private testing exclusively on a camera personally owned by the Applicant.

4. Explicit exclusions (prohibited)

If granted, the Applicant agrees NOT to:

- Remove or bypass SPT activation or license controls;
- Enable or reproduce unrelated paid repair functions;
- Publish or redistribute SPT executables, libraries, license information, or proprietary service files;
- Redistribute any BootFaexe.bin supplied under confidential or restricted terms;
- Represent TornadoEos as an official or SPT-authorized product;
- Use the resulting work commercially without separate written authorization.

5. BootFaexe.bin

This draft does not itself authorize redistribution of BootFaexe.bin. SPT may elect one of the following when executing this instrument:

- Option A — No file supplied; Applicant uses only separately authorized channels.
- Option B — Restricted supply of an EOS R50-compatible BootFaexe.bin under a confidential attachment for personal use on the identified camera only.
- Option C — Referral to an authorized service partner / channel.

6. Alternatives requested if exception is refused

- Official WPD/MTP protocol documentation;
- An SDK or documented interoperability interface;
- An EOS R50-compatible service utility;
- A legitimate EOS R50 BootFaexe.bin with usage instructions; or
- Referral to an authorized party that can provide the required file or service.

7. Conditions (for SPT to check if required)

- ☐ Government-issued photo ID
- ☐ Proof of ownership matching serial 6f63db071241f1df1d2d2bad4c755979
- ☐ Separate confidentiality / limited-use agreement
- ☐ Signed acknowledgment returned within 14 days

8. Intellectual property / liability / term

All SPT software, documentation, and service files remain the exclusive property of SPT and its licensors. No ownership is transferred. Any authorization, if granted, would be provided as-is; the Applicant assumes risk of camera modification. Proposed expiration is one year from the issue date unless extended or earlier revoked for breach.

9. Applicant acknowledgment (sign before sending)

I have prepared this draft using measured device data from my own camera. I understand this document has no legal force until an authorized SPT representative confirms permission in writing. I will not begin prohibited analysis unless I receive clear written authorization.

Applicant name: _____
Signature: _____
Date: _____

10. SPT authorization (for SPT only)

If SPT grants the limited exception described above, an authorized representative should complete and sign below (or reply by official email with an equivalent confirmation and authorization ID).

Granted / Denied: _____
Authorization ID: _____
Effective / Expiry: _____
Selected BootFaexe option: A / B / C (circle one)
Name / Title: _____
Signature / Date: _____

NOTICE: This PDF was generated locally by the TornadoEos project as an applicant draft. It is not an SPT-issued license. Presenting an unsigned draft as a granted authorization would be false.
